

## Year 9 - 5.1 Mathematics Assessment Task Term 3 2023

**TOPICS:** Pythagoras' Theorem and Trigonometry

**SUBMISSION REQUIREMENTS:**

Term 3 – Week 6 – 9MAT1R1 & 9MAT1L1 -

**Period 4 – WEDNESDAY 23<sup>rd</sup> of AUGUST**

**MARKS:**

**Section 1 -** /30

**Section 2 -** /10

**TOTAL -** /40

**OUTCOMES TO BE ASSESSED:**

**MA4 – 16MG – applies** Pythagoras' theorem to **calculate** side lengths in right-angled triangles, and **solve** related problems

**MA5.1 – 2WM – selects** and **uses** appropriate strategies to solve problems

**MA5.1 – 10MG – applies** trigonometry, given diagrams, to solve problems, including problems involving angles of elevation and depression

**DIRECTIONAL VERBS:**

**Uses – applies**, utilise, employ in a particular situation

**Selects** – connects, relates cause and effect; make the relationships between things evident; provide why and/or how using appropriate terminology, diagram and/or symbols

**Solve** – ascertain, **calculate**, evaluate, determine from given facts, figures

**TASK DESCRIPTION:**

In this task you will be applying Pythagoras' Theorem and Trigonometry to find missing sides and angles of right angled triangles.

There are **two** sections to this assessment task

- Section 1 – Creating five questions using Pythagoras' Theorem and trigonometry
- Section 2 – Using a clinometer to find the unknown lengths of two objects

Sections 1 and Section 2 are to be completed individually and at home. You will be given 1 period of class time to assist you in completing Section 2 where an example will be modelled for you. **If you are absent on the day this task is modelled, it is your responsibility to seek assistance from your teacher outside of class time.**

Ensure that you have thoroughly checked all your work for any errors and compared your work against the **Assessment Marking Criteria** prior to the submission date.

This entire booklet needs to be submitted on **WEDNESDAY 23<sup>rd</sup> of AUGUST.**

Student Name: \_\_\_\_\_

**ASSESSMENT MARKING CRITERIA:****Section 1**

<b>Question 1:</b> Pythagoras' Theorem – finding the length of the hypotenuse	2	Question is complete and meets all criteria
	1	Slight errors in question – question does not ask to find the length of the hypotenuse
	0	Questions is incomplete or not attempted – question does not involve Pythagoras' Theorem – question is not clear
<b>Image including Diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

<b>Question 2:</b> Pythagoras' Theorem – finding the length of a side	2	Question is complete and meets all criteria
	1	Slight errors in question – question does not ask to find the length of a side
	0	Questions is incomplete or not attempted – question does not involve Pythagoras' Theorem – question is not clear
<b>Image including diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

<b>Question 3:</b> Trigonometry - finding the unknown denominator <b>Ratio:</b> $\sin\theta = \frac{O}{H}$ $\cos\theta = \frac{A}{H}$ $\tan\theta = \frac{O}{A}$	2	Question is complete and meets all criteria
	1	Slight errors in question – trigonometric ratio used more than once - question does not ask to find the unknown denominator
	0	Questions is incomplete or not attempted – question does not involve trigonometry – question is not clear
<b>Image including Diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

<b>Question 4:</b> Trigonometry - finding the unknown numerator <b>Ratio:</b> $\sin\theta = \frac{O}{H}$ $\cos\theta = \frac{A}{H}$ $\tan\theta = \frac{O}{A}$	2	Question is complete and meets all criteria
	1	Slight errors in question – trigonometric ratio used more than once question - does not ask to find the unknown numerator
	0	Questions is incomplete or not attempted – question does not involve trigonometry – question is not clear
<b>Image including Diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

<b>Question 5:</b> Trigonometry – finding the size of an angle <b>Ratio:</b> $\sin\theta = \frac{O}{H}$ $\cos\theta = \frac{A}{H}$ $\tan\theta = \frac{O}{A}$	2	Question is complete and meets all criteria
	1	Slight errors in question – trigonometric ratio used more than once question - does not ask to find the size of an angle
	0	Questions is incomplete or not attempted – question does not involve trigonometry – question is not clear
<b>Image including Diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

**Total: /30**

## Section 2

<b>Object 1:</b>	1	Object named
	0	No object named
<b>Image including Diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

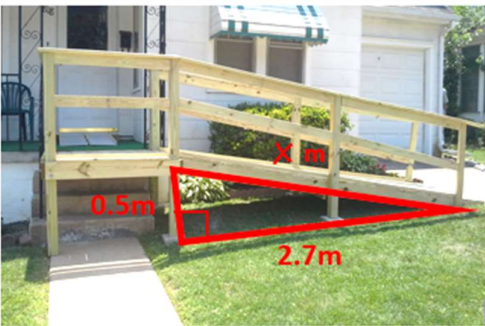

<b>Object 1:</b>	1	Object named
	0	No object named
<b>Image including Diagram</b>	2	Image including diagram is neat, complete, correct and fully labelled with realistic measurements
	1	Image including diagram is mostly complete – may contain some minor errors - may have unrealistic measurements
	0	Diagram is incomplete or not attempted – image is not included
<b>Solution</b>	2	Full and correct solution provided
	1	Partial solution – may contain minor errors
	0	Little or no attempt at solutions

**Total:    /10**

# SECTION 1 – Task Requirements

You will create **five questions** with images (including diagrams) and worked solutions. These questions need to be based on real-life situations which can be solved using Pythagoras' Theorem and trigonometry.

Use the following example as a guide to creating your questions –

<b>EXAMPLE – Section 1</b>	
<b>Question 1:</b> Pythagoras' Theorem – finding the length of the hypotenuse (2 marks)	
Bob is building a wheelchair ramp. The wheelchair ramp needs to be 0.5m high. It will have a horizontal distance of 2.7m. What is the total length of the wheelchair ramp?	
<b>Image including Diagram</b> (2 marks)	<b>Solutions</b> (2 marks)
	$a^2 + b^2 = c^2$ $0.5^2 + 2.7^2 = c^2$ $c^2 = 0.25 + 7.29$ $c^2 = 7.54$ $c = \sqrt{7.54}$ $c = 2.7459 \dots$ $c = 2.75m \text{ 2.d.p}$

To complete this section successfully you will need to:

- Create **one** question using Pythagoras' Theorem to find the length of the hypotenuse
- Create **one** question using Pythagoras' Theorem to find the length of a side
- Create **three** questions using trigonometry
  - all trigonometric ratios must be used -  $\sin\theta = \frac{O}{H}$ ,  $\cos\theta = \frac{A}{H}$  and  $\tan\theta = \frac{O}{A}$
  - **one** question must involve finding the unknown denominator
  - **one** question must involve finding the unknown numerator
  - **one** question must involve finding the size of an angle
- Ensure all questions are coherent. These can be clearly hand-written or typed
- Ensure all questions include a labelled diagram which is an **originally sourced image**; that is, you took the image yourself. You must label your diagram clearly; either hand-drawn or digitally created
- Ensure questions include **complete worked solutions**. Round all answers to **two decimal places**. These can be clearly hand-written or typed

Use Section 1 - Scaffold to help you complete this section.

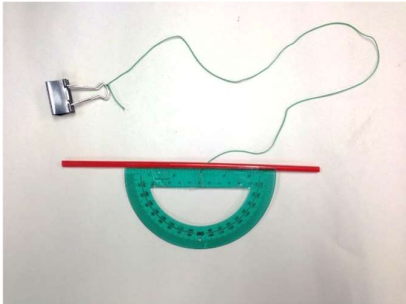

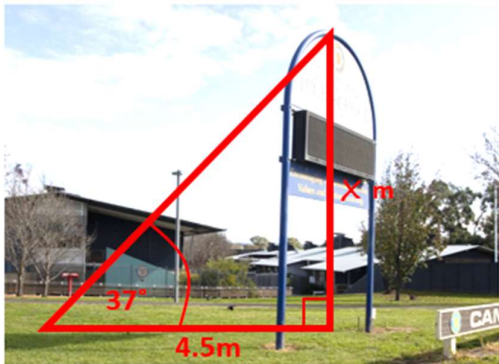

## SECTION 2 – Task Requirements

You will make and use a clinometer to find the unknown lengths of **two** objects, using trigonometry.

A clinometer is a tool used to measure the angle of elevation (angle from the ground) in a right-angled triangle. Instructions for making and using your clinometer are on the next page.

You are encouraged to use digital measurement apps to assist you when making measurements.

Use the following example as a guide to creating your questions –

EXAMPLE – Section 2	
Clinometer Image	
	
Object 1: Camden High School Sign (1 mark)	
Image including Diagram (2 marks)	Solution (2 marks)
	$90^\circ - 53^\circ = 37^\circ$ $\tan \theta = \frac{\text{Opposite}}{\text{Adjacent}}$ $\tan 37^\circ = \frac{x}{4.5}$ $x = 4.5 \times \tan 37^\circ$ $x = 3.3909 \dots$ $x = 3.39\text{m } 2.\text{d.p.}$

To complete this section successfully you will need to:

- Create your own clinometer using the instructions given
- Attach an image of your completed clinometer
- Select **two** objects to find the unknown lengths and use the clinometer to find the angle of elevation
- Ensure all questions include a labelled diagram which is an **originally sourced image**; that is, you took the image yourself. You must label your diagram clearly; either hand-drawn or digitally created
- Ensure questions include **complete worked solutions**. Round all answers to **two decimal places**. These can be clearly hand-written or typed

Use Section 2 - Scaffold to help you complete this section.

## Instructions: How to Make and Use the Clinometer

### Materials

- Straw
- Protractor
- Tape
- String
- Small Weight

### Steps

1. Attach the string to a protractor at the marked line in the centre of the protractor using tape. If you do not have a protractor, one has been included at the end of this document.
2. Attach the weight to the end of the string. The weight doesn't need to be too heavy. This could be a rubber, paper or binder clip. This weight will ensure the string is taught and enable you to read the angle.
3. Attach the straw along the edge of the protractor using tape. You will look through this straw when aiming your clinometer at the top of the object you are measuring.
4. Take a photo of your clinometer and attach the image to your assessment task.

Your clinometer is now ready to use and should resemble the image below:

## Instructions: How to Use the Clinometer

1. Select an object to find its unknown height. Remember to take a photo of the object you are measuring and attach it to your assessment.
2. Ensure that you are far enough away from the object to see the top from ground level.
3. Measure and record your distance from the base of the object.
4. Measure and record the angle of elevation using the clinometer **from ground level**. To do this look through the straw to the top of the object that you are measuring. Read the angle shown by the string hanging across the protractor. Subtract the angle shown from  $90^\circ$ . This measurement is your angle of elevation.
5. Complete the diagram and use trigonometry to calculate the height of the unknown object.
